Spartan Parts Now Offers a New Filler

Holland, Michigan USA... Spartan Parts, a subsidiary of Fogg Filler Company, is focused on custom part designs and fabrication for commercial filling equipment. We are specifically designed to look for ways to improve the efficiencies of an organization's liquid and food packaging needs. Spartan Parts was developed to support non-Fogg Filler equipment, upgrades, and consumable parts in our existing and new customers filling facility. We back our company's equipment upgrades and products with the same expert engineering and services that our customers have grown to trust from the Fogg Filler brand. Spartan Parts is excited to introduce a new filler offering the SP-63!

Spartan Parts has designed and builds a low-cost gravity liquid filling machine called SP-63, to better supply the demands of a quality machine with a short lead time. The SP-63 is the ideal machine for small businesses or start-ups in the filling industry. Specifically, hand sanitizer has been a great fit. Or for already established companies that need to quickly produce a new product. The gear-driven SP-63 can fill liquids up to 40 bottles per minute for a 250ml bottle.

Included in the cost of the SP-63 is a Cap in Head Capper, machine mounted Cap Sorter, and a set of custom change parts. Additional custom change parts and valves can be purchased if more than one bottle is being filled. Spartan Parts Bottle Rinsers and Pack-On Pack-Off Table can also be added to the filling machine to customize the machine for the customer. The SP-63 small footprint helps keep shipping cost low, and to better fit the needs of customers with small spaces and facilities.

SP-63 Features:

Six Custom Valves

Small Footprint (Wide: 5' 1/2" and Height: 10')

Three Head Cap in Head Capper

Machine mounted Cap Sorter

Gear-Driven
